## Introduction

Rapid Balance is a software program that will balance VAV HVAC devices. The following devices can be balanced using Rapid Balance tool:

- XL10 VAV Devices
- Spyder/WEBS/ILC/Lynx VAV Devices
- Stryker VAV Devices
- CP-7XXX Devices

## Overview

This document will provide you step by step instructions on how to successfully install the Rapid Balance tool on your system. Look for the pre-requisites mentioned below before installing the Rapid Balance tool.

Please refer the document **31-00136-01** 'Rapid Balance Tool End-User Security Guide' in the Honeywell Buildings Forum to securely maintain and decommission the tool.

## Pre-requisites

The installer should have knowledge of the windows environment to facilitate installation on a PC. The software program must be installed using Rapid Balance installation package.

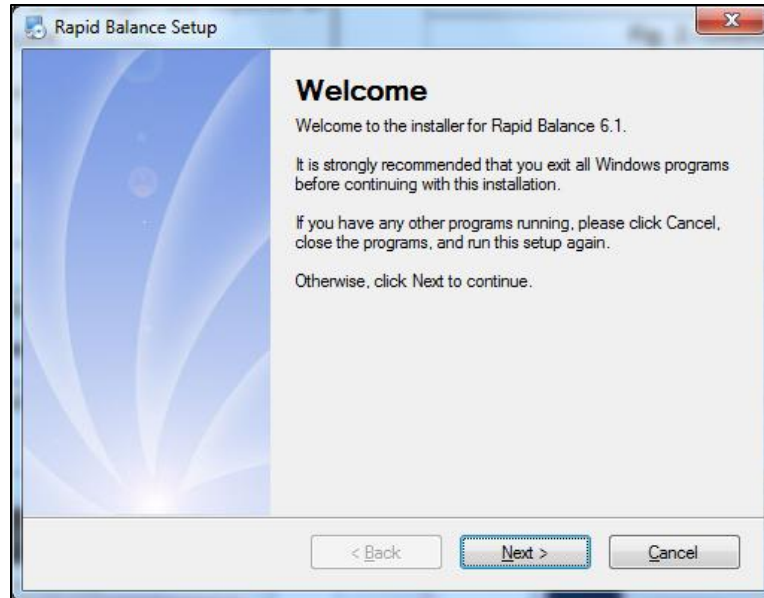

Administrator rights or privileges are required at the time of installation

## Installing Rapid Balance Tool

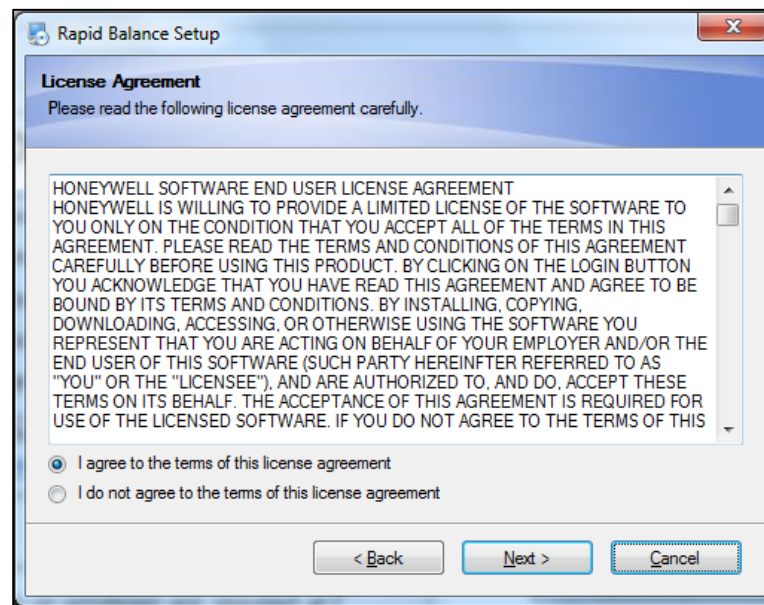

1. Double click the Rapid Balance executable file (e.g. RapidBalance6.1Setup.exe).

The installer opens and the Rapid Balance Setup screen appears.

2. The Setup screen shows information such as tool version being installed. Click “Next>” to proceed with the installation.

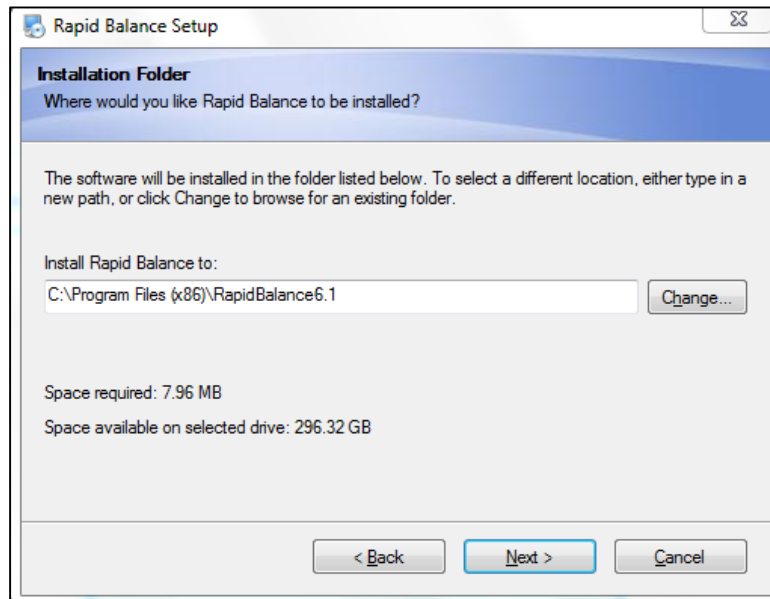

3. Select “I agree to the terms of this license agreement” to agree to the End User License Agreement [EULA] and click “Next >” button to proceed.

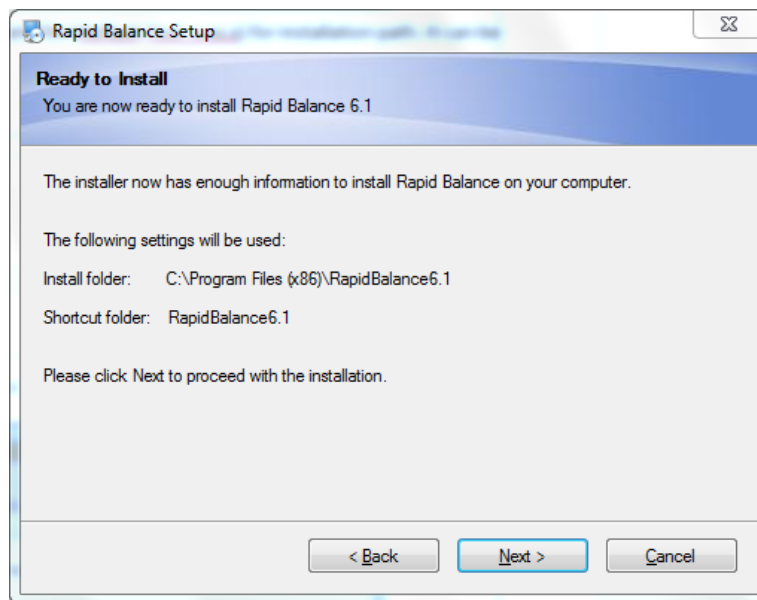

To cancel the installation click “Cancel” button

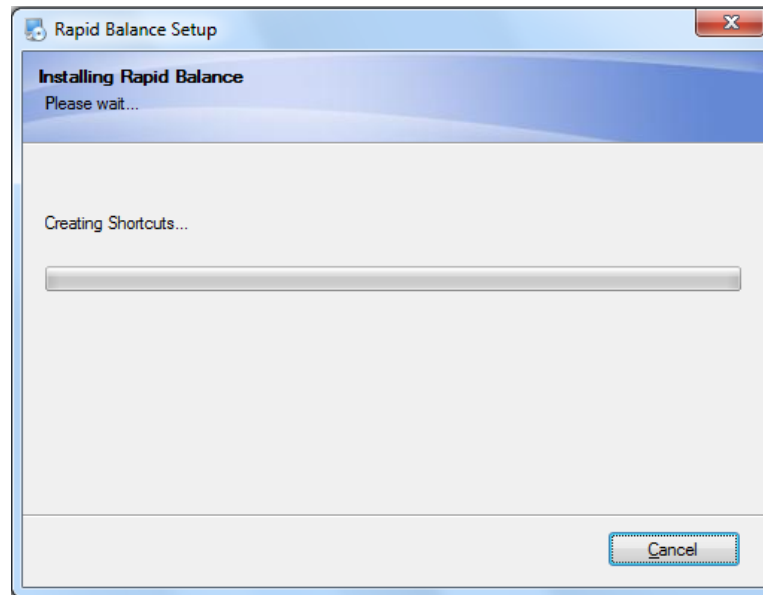

- The software is installed to "C:\Program Files(x86)\RapidBalance6.1" path by default. The destination folder can be changed by typing in the field or by using the "Change" button.

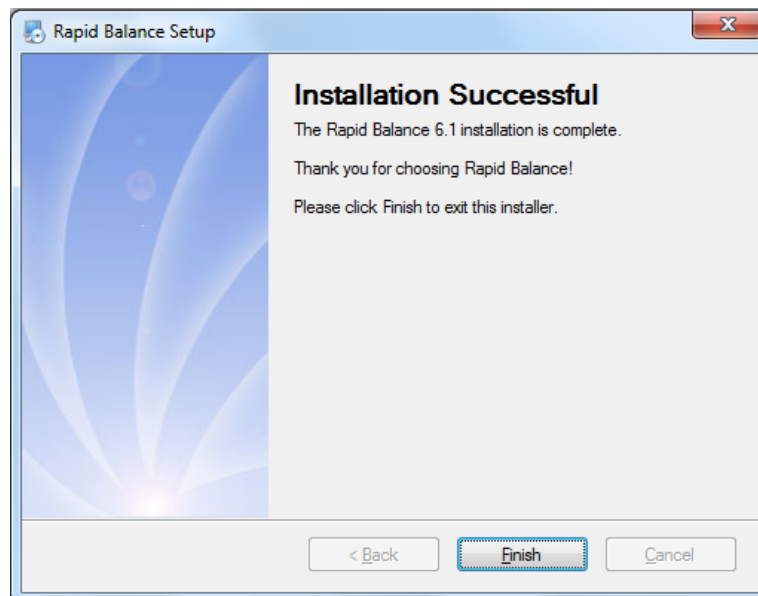

- Click "Next>" to proceed. The progress of installation is shown below.

The progress of installation can be seen as shown below.

6. Click "Finish" to complete installation.

When the installation is complete, a shortcut icon for the Rapid Balance application will be created on desktop automatically.
